DE PSITTACO POIKILORINCHO.

Cap. VI.

PSITTACVS hic, cuius iconem proximè subiicimus, inter mediocres magnitudine faciliè principatum obtinet. Est enim longus duos dodrantes, non Gallina minor. Dono mihi datus fuit à nobili S. Stephani equite Florentino dicto Bans, & anatomiae subiectus, qui certè non vulgariū rerū, vt in generali tractatu demonstrauimus, materiam nobis præbuit. Longus erat ab extremo rostrum ad ultimam caudam binos, vti dictum est, dodrantes. Rostrum superius in superiori parte ex viridi ad cæruleum, ad latera colore ochræ, in cuius extremitate macula transversalis candida percurrit: inferius rostrum circumcirca coloris plumbei, in medio lutescentis. Vertice plumulis, aureis, seu luteis ornatus. Cætero pleròq; corpore virefcebat, dorso obscurius dilutius pectore & ventre, interlucere luteo, radicibus vbiq; cinereis. Remiges parte exteriori, ventrem versus, initio virides, paulatim in colorem subcæruleum, seu amethystinum, purpureum vè potius terminabantur, nigra cætera. Secundæ in ordine longissimæ totæ luteæ erant. Quæ medijs fermè alis conspiciebantur, ad principium latere exteriori, quoq; ventrem respicit, primū viridi, dehinc miniaceo obscuro, inde viridi, postremū apice ipso partim violaceo, partim nigro vicissim variabant. Cauda duodenis instructa pennis, quarum quæ è latere sunt, vtrinque quaternæ, quæ enascuntur, initio sui primū virides erant latere exteriori, luteæ interior inde rubeo, coccineove colore, tertio ordine denuo viridi, postremo luteo variegatæ. Reliquæ quatuor mediæ totæ virides, at fine sui nōnihil lutei habebant. Pedes plumbei, quarerni digiti, bini antè, retrò totidem, vt in Picis Martijs, interiores quidem exterioribus multò breuiores. Vngues, vt rapacibus, adunci Tibiæ breuissimæ, nempe inter poplites & talos, digitum longæ, sed crassiusculæ. Iconem habes pag. 671.

DE PSITTACO VIRIDI.

Melanorincho. Cap. VII.

Magnitudo.
Rostrum.
Oculi:
Color totius corporis.

PLIVD reperitur Psittacorum genus mediocris magnitudinis, quod à rostrum nigro tanquam à præcipua nota cognominare licet. Longus est hic dodrantem & palmum. Rostrum, vt reliqui, crasso, at nigro toto. Ad rostri initium in vertice, & sub gula color cæruleus ad viridem tendit. Oculi iris croceo saturo, pupilla nigra Caput reliquum & pectus lutea sunt. Venter inter luteum, & viride ambigit, quemadmodum & cauda superior. Collum, dorsumq; totum cum alis virore pleno tinguntur, adeo ut penè totus viret, nisi costa alæ, quæ corpori adnectitur, extrema coccineo ruberet, dehinc penna in extremis alis, quæ ventrem spectant, sequerentur nigra, remigum deniq; ruberet extrema. Præter hæc & uropygium inferius coccineo rubore tinctum est. Pedes fulci. Vngues nonnihil adunci, nigri. Hunc Psittacum viridè melanorincho à rostri nigredine appellare libet. Palmum cauda plus minus longa est. Huius Psittaci Iconem habes pag. 672.

DE PSITTACO LEVCOCEPHALO.

Cap. VIII.

Magnitudo.
Rostrum.
Oculi.
Color totius corporis.

PSITTACVS Leucocephalus à potissima nota dicitur hic, quem ab Illustri Comite Rodolpho de Isolanis Senatore nostræ vrbs amplissimò dono accepit. Dodrantem & digitum unum longus est. Rostrum duos digitos crassum, album: & pars capitis rostrum continua item alba. Oculi pupilla nigra, iris ferruginea. Vertex & frons, quæ albert, maculis nigris variegata sunt. Occiput, collum, dorsum, alæ, uropygium superum obscuro ac pleno virore tinguntur. Gula & alarū costæ supra rubore cinnabario. Pectus ac femora virent denuo. Pars ventris inter femora & pectus interiecta fusco subrubido, aut eo colore, quem pictorum vulgus terræ umbræ vocat,
