DE PICA CAVDATA INDICA. Cap. XIII.

SPECIOSISSIMAM hanc auem inter nonnullas alias Iaponenſium rex ſummo Pontifici pro ſingulari munere ante aliquot annos tranſmiſit, vt ex Illuſtriſſimo, & Excellentiſſimo D. Cæſare Marchione Facchinetto Senatore amplиſſimo, qui eas Innocentio Nono Bononienſi Pontifici Opt. Max. patruo ſuo acceptas referebat, intellexi. Hanc inquam auem, etſi ratione colorum parum ſimilitudinis cum ſuperiori Pica obtineat, quia totius corporis habitum, & caudæ longitudine ad illam accedere videtur, Picam caudatã cognomento Indicam nuncuplare placuit. Auis eſt, non tam ob colorum diuerſitatem, quam ob inſignem caudæ longitudinem, aſpectu iucundiſſima. Quod ad magnitudinem attinet, ea quantum ex pictura conijcere licet, cum Pica noſtrate fermè eadem. Roſtrum, tibiæ pedeſq; ruberſcebant. Caput totum, & collum, quod torquis albus ambit, erant cærulea. A ſuperiore roſtri parte inter vtrumq; oculum macula tres ferè digitos longa, & pollicem lata punctolis, ſeu potiùs lineolis nigris tranſuerſalibus conſperſa ad dorſum vſque protenditur. Dorſum & ſcapulæ erant ferruginea Vropygium luteum. Alarum pennæ veſtitrices caſtaneæ, ſed lineis nigris craſſiuſculis (quæ forraſſis pennæ exiguæ fuerint) per longitudinem poſitis reſpergebantur: reliquæ veſtitrces pennæ erant virides, ſed in marginibus magis. His denique cæruleæ excipiebant, calamis, & marginibus ad albedinem vergentibus. Remiges eiuſdem cum poſterioribus coloris erant, nempe cærulei. Pectus & venter ad anum vſque candidiſſima. Totus alarum internus color leucophæus ad cæruleum declinas. Cauda facta ex pictura coniectura octo duntaxat pennis conſtabat, quæ omnes magnitudine differebant, & quæ duplo, & amplius cæteris maiores erant, & colore etiam à cæteris diſtinctæ. Erant enim totæ excepto calamo, & extremitatibus, quæ alba ſunt, cæruleæ. Reliquæ pennæ à principio ad medium, vſque cæruleæ, cætera candidæ, quarum medium macula inſignis cærulea quidem, ſed colore admodum intenſo, vt quaſi ad nigredinem accederem videatur, percurrit. Atque hæc meo iudicio maris deſcriptio fuerit; quam enim fęminam credebam, huic quidem per omnia ſimilis erat, ſed alba illa verticis macula alba lineis nigris carebat: & veſtitricum pennarum alarum ſecundus ordo, quæ in ea erant cæruleæ, in hac vireſcebant. Vtriuſq; iconem habes præcedentibus paginis.

Magnitudo. Color. Caput. Dorſum. Ala. Venter. Cauda. Femina à mare diſtinctio.

DE PICA GLANDAIRA. Cap. XIIII.

SYNONIMA.

HAEC Pica Plinio glandaria, Ariſtoteli tradẽte a Bellonio Μαλακοκρανης, ſeu Molliceps dicitur, quibuſdam verò Pica granata. Sunt qui ποικιλιδα vocent; verùm id nomen Picæ varię potiùs competit. Græci recentiores καρκαξα appellant: Lycophron teſte Iacobo Delechãpio λαληθρον κισσαν Latini Garrum, ſeu Garrulum, quidam perperam Spermologum Itali vulgò Ghiandaia a glandium eſu: Alibi tamen Berta vocatur; Genuenſibus, & Chij incolis, qui ex Genuenſibus, & Græcis mixti ſunt Bertina, quaſi cinerea, quod tota fere auis colore tali conſtet: Hiſpanis Gayo, & in Aragonia Caio, Gallis Gay, Sabaudis Giaion, Germanis Hacher, Haetzel, vel Haetyier Baumhaetzle, circa Friburgũ Heluetiorum Herrenuogel, Sueuis Iaeck, nonnullis Margraff, & Marcolfus, & Holzſch eier, Gallis Brabantiæ cõterminis Girau, & Richau, Brabantinis BroecKexter, quaſi Pica paluſtris, quòd eiuſmodi loca amet, licet tamen in arboribus nidificet, Anglis Iay, Illirijs SoyKa.

a Lib. 6. de Aut. ca. 7. Molliceps. Pica granata. καρκαξα. Garrulus. Ghiandra Bertina.

GENVS. DIFFERENTIÆ.

HANC Auem ſecundum Picarum genus facimus, quòd oppida colentibus, vtpote quæ ſyluas agroſq; tantùm habitat, minus nota ſit. Differt à Varia cùm magnitudine, tùm verò maximè colore. Habet enim ad alarum latera tranſuerſales notas cæruleas, quales in nullo fermè alio volucrum genere conſpicias. Habet item tam amplum oris hiatum, vt glandes, atque caſtaneas integras Palumborum more deglutiat. Habet deniq; caudam duplo ferè quàm Varia breuiorem. His itaque notis ab illa diſtinguitur.

Vt à Varia differat.
