I. *Morus cum fructu.*

**T**itulare folium contextam frondiferis è mori ramis floribusque ac fructibus conspicuis, lauream repræsentat, cuius foliis proprio tanquam pabulo bombyces aluntur; hi vermes ex ovulis per hyemis cursum à curiosioribus sedulò conservatis prodeunt, tempore verno per solis calorem excluduntur, extunc illis mori folia in alimentum exhibentur, sollicitè cavendo, ne vel minimū sint humida, eos aliàs necatura. Octo circiter aut decem dierum, cineritio obscuro, cutis: (quod ter quaterve accidere solet:) brevi mutandæ prognostico, colore imbuuntur: color eorum in totum ferè albicans est, ast ubi totaliter acreverunt, clarescunt, ac quodammodo pellucidi fiunt, incessanter huc illuc capite nutantes ex ore Sericum texere incipiunt, amatores itaque hæc signa conspicientes cucullo illos imponere consverunt, unde sibimet ipsis ovalis figuræ carcerem parant; hacce texturæ albicante, albi quoque exstiterunt vermium pediculi, flavi verò fuere, si flavo tincta colore textura fuerit, hoc peracto vermis in aureliam transmutatur, hæc ei figura viginti dierum spatio immanet inde verò phalæna albicans propullulat, quæ pelliculam hanc perrodit, & ab eâ se se extricat, fuscum quandam liquorem excernens, Ex utroque sexu constituitur hic vermis, masculus corporis, femella, tenuioris est, factò coitu in chartam, hunc in finem eis apposita ovula sua arctè collocant, ac ita novem decemve diebus sine escâ & sine potu vivunt, ac tandem intereunt. Ovula prius colore flava grani milii magnitudinem æquantia, paulò post cineritio colore tinguntur, ac ita in vernum usque tempus, uti superius asseruimus, conservantur.

II. *Tulipa purpurea.*

**H**Æcce tulipa, jaspis etiam marmorea audiens, insidentis sibi erucæ in mensis maii finem usque pabulum est, tuncque in aureliam cinereum commutatur elapsis autem diebus quindecim exit inde phalæna alis superioribus rubello, inferioribus
