

## Werk

**Titel:** Erucarum ortus, alimentum et paradoxa metamorphosis  
**Autor:** Merian, Maria Sibylla  
**Verlag:** Oosterwyk  
**Ort:** Amstelædami  
**Jahr:** 1717  
**Kollektion:** Zoologica  
**Digitalisiert:** Niedersächsische Staats- und Universitätsbibliothek Göttingen  
**Werk Id:** PPN476830389  
**PURL:** <http://resolver.sub.uni-goettingen.de/purl?PPN476830389>  
**OPAC:** <http://opac.sub.uni-goettingen.de/DB=1/PPN?PPN=476830389>  
**LOG Id:** LOG\_0013  
**LOG Titel:** VI. Ranunculus dulcis  
**LOG Typ:** chapter

ficit, & in aureliam nigram convertitur, quatuordecim diebus elapsis Phalæna, qualis flori inhæret, inde surgit, hujus alæ superiores fuscæ sunt & albicantes, inferiores helvæ, nigroque colore maculatæ, ovula parit è cinereo viridia.

Floſculo qualis infidet, talis mihi erat erucula, hæc ligno firmiter adhærebat dura brevisque facta, uti ſuprà illam majorem erucam conſpicitur, decem diebus effluxis inde nigra muſca erumpebat, prodibant & aliæ muſcæ à tergo flavæ, quæ, duarum ex iisdem hic delineatarum icone repræſentantur.

#### VI. *Ranunculus dulcis*

**S**imile genus erucarum hos ſuprà flores inveni, quas iisdem integro menſe Majo enutrivì, in dorſo auriaci, & deſub è lucido flavi ſunt coloris, cæterùm nigræ ſunt, ac quodammodò pilofæ, tactæ conglobantur, diuturnâque quiete torpent immobiles, in menſe Majo, telam texunt, & fuſcam in aureliam tranſmutantur, qualis folio adhærens delineatur, poſt quatuordecim dies ſpecioſa prodit inde phalæna, cujus caput, corpus, alæque ſuperiores flavo ſulphuris atque nigro maculatæ, inferiores alæ nigro rubroque colore variegatæ ſunt: hæ phalænæ interdiu unâ ſedent quietæ, ſub vesperam volitant, tempore matutino quietis capeſſendæ gratiâ umbroſa loca ſectantur, ſpatio dierum aliquot elapſo ovula flava parientes emoriuntur.

#### VII. *Prunus florens.*

**M**agnam hanc viſcentem punctis nigris diſtinctam erucam nigro capite, in principio menſis Maii ſuper hac arbore inveni, tacta filo ex ore prodeunte deſcendit, quo mediante itidem aſcendere novit, folio plerumque, à ſemetipſâ circumvoluto infidet, ex eo recedens abundèque pabulo ſuo reſecta feſtinanter in ſuum ſeſe folium recipit, in quo etiam texturam parat, & in aureliam deſiguratur, exinde phalænas exire deprehendi, quarum corpus antè ex lucido flavo, pars poſterior unâ cum alis ſuperioribus albicanti colore ſunt prædita.

Interiùs jacet ſubflavus in vermium excrementis repertus
