acarus, qui trium dierum spatio in dolio lumen fulcum immutatus, elapsis quatuordecim diebus in talem, qualem infra delineavi, muscam transformatus fuit.

In extremitate, folii viridis eruca virescens exhibetur, turbata, filo deorsum, eodemque mediante iterato sursum fertur, hisce foliis eam enutrivi, ad duodecimum usque Junii diem, ex tunc in nympham flavescentem transiit, ex quâ die vigesimâ sextâ Julii, qualis in folio depingitur, musca nigricans educta fuit.

VIII. Taraxacon.

Super Sylvestri hocce flore in mense Aprili deprehenditur eruca fuscâ corporis, in capite duo quasi pilosa cornua ges-
tat, ut & in dorso quinque adhuc ejusmodi fasciculos exstan-
tes, cæterum corpus pilis flavis obsitum est; in principio mensis
Maii telam ovalem propriis è pilis conficit, & in aureliam fus-
cam pilis flavis obsitam, ut infrà vides, immutatur, in fine
mensis ejusdem inde phalæna cinerea producta fuit, uti supe-
riùs in folio videtur.

IX. Cerasa acida rubra flore plena.

ERUCAM hanc super omni genere fructiferarum arborum,
præcipue tamen cerasorum est reperire, Metamorphosin
subitura parat ovalis figuræ texturam, argenti more splendi-
dam, & instar chartæ pergamenæ quodammodo tabulosam,
huic inclusa fuscam in aureliam transformatur, qualem diver-
sa duo folia exhibent, post quatuordecim dies, phalæna cine-
rei coloris indè prodit, qualis superiùs super hocce ramulo vo-
litans exhibetur.

X. Flos grossulariæ, Sativæ, Spinosæ.

IN mense Aprili hac super arbusculâ genus quoddam eruca-
rum corpore fuscarum, striis nigris albisque maculis asper-
sarum invenitur, testudineo gradu incedunt, mense Junio ru-
fam sibi ovalis figuræ telam texentes fuscam in aureliam immu-
tan-
