XVII. *Vermes miraculoſi.*

DUas has ingentes, formâ tamen, atque colore diſconvenientes erucas in herbâ, earundem pabulo reperi, ſimili cum aliis Metamorphoſe mutabiles, quæ ſemetipſas intexentes, in aurelias cineritii coloris immutantur, è quibus ingentes duæ obſcuro quodam auriaco colore præditæ phalænæ poſtmodum, in totum ſibi propemodùm ſimiles, in conſpectum venerunt.

XVIII. *Malus mellea florens.*

HOc erucarum genus arbori cuilibet fructiferæ ſummè nocivum eſt, interdiù per univerſam arborem diſperguntur, noctù verò in faſciculum aranearum telæ ſimilem unà conveniunt, hæc eruca ſubfuſca eſt, cuilibet inſectioni dorſi cærulea, ſimul ac rubicunda corallia ſunt intertexta, telâ tenui circumcircà confectâ, in aureliam fuſcam invertuntur, undè diebus quatuordecim elapſis albicans fuſcis ſtriis diſtincta phalæna prorumpit, ovula parta Lanugine ſubflavâ contegunt, ita ut in conſpectum non veniant, hocce modo hyemali tempore à frigore ſeſe tuentur. In pomis itidem ſubflavam eruculam inveni, quæ ſub finem menſis Maii telæ ſeſe intexuit, in quâ hyemali tempore morabatur, verno, qualis ſuprà virentia folia conſpicitur, exigua muſca prorupit.

XIX. *Roſa incarnata.*

SUper roſæ calyce viridem eruculam ſedentem conſpicies, quæ non folia ſolummodò viridia depaſcitur, ſed & calycem excavat, ità ut roſarum accretionem impediat, in fine menſis Maii in Aureliam ochræ colore tinctam immutatur, Junio papiliones in roſis appicti prodeunt.

Subtus roſæ caulem erucula fuſca prorepit, quæ medios calyces per modum prioris exedit, Majo metamorphoſin ſubit, Junio menſe, qualis ad latus volitans appictus eſt, papilio prodit, hujus alæ ſuperiores ochræ, inferiores verò cinereum colorem referunt.
