aliquot diebus ex eâ quinque erepebant acari, in doliola alba transeuntes, hæc autem memorata doliola contexebat eruca, periitque; post dies quatuordecim quovis è doliolo parva musca prorupit.

XXIII. *Cerasus major fructu subdulci.*

PEr elegantis hujus erucæ dorsum nigra gemmis quasi intertexta vincula obliquè ferebantur, hisce foliis eam enutrivit, aliquandò deficiente pabulo, sibimet ipsis invicem esca fuère; mense Julio ovalis figuræ telam argenti more fulgidam conficientes in aurelias immutabantur, Augusto phalenæ elegantes colore nigro, albo, cinereo, auriaco, roseoque colore præditæ, prodibant.

Supra cerasum erucula formosa celerrimi gressûs exhibetur, in Augusti principio fuscam in aureliam immutata, tandem in fine mensis ejusdem papilio, facta est, qualem figura repræsentat.

XXIV. *Rosa maxima multiplex.*

Hocce erucularum viride genus nigris constans capitibus, pediculos, calycesque, eodem, quo in inferiore rosæ calyce conspicis, modo, internè exedit, tactæ filo descendunt, eodemque mediante reascendunt, in fine Maii in aurelias fuscas immutantur, elapso quatuordecim dierum spatio fulgurantes ut aurum, volatu celeres, turbati dextrimmè sub folia sese recipiendi, peritissimi papiliones inde prodeunt.

XXV. *Fruetus grossulariæ, Spinosæ.*

Ingens in folio, propemodùm erecta demonstratur eruca, tacta, parte corporis superiore huc illuc agitur, trunculis posterioribus ità firmiter adhæret, ut illæsa vix aut ne vix quidem exsolvi possit; in finem usque Maii eam enutrivit, tunc in aureliam fuscam invertebatur, elapso quatuordecim dierum spatio, albi, fusci, maculisque variis aspersi papiliones inde prorumpabant, quales inferior figura exhibet.
