Petiolum parvula albicans eruca capite nigra perreptat, similes etiam in flore deprehenduntur; hæc matutino tempore è texturâ prorepentes escam capiunt, quâ citissimè ingestâ suum in domicilium iteratò sese conferunt, idque magis ac magis amplificanti, ad justam magnitudinem ubi pertigerunt, texturam conficiunt albam, inque aurelias, ac successivè phalænulas immutantur, quæ, partis ovulis, intereunt.

III. *Nasturtium Hortense.*

MAjo mensè hac super herbâ quàm plurimæ deprehenduntur eruculæ in dorso nigricantes, inferiùs albæ, quolibet in latere anteriori tres nigricantes ungviculos, ac iterum in utroque latere novem pediculos gestant, Junio mensè tenui telâ clausæ in aurelias fuscas immutantur, post breve temporis spatium phalænula è fusco variegata prodit, cineritii coloris, in volando impotens. Inferiùs ochræ colore flavo tinctus vermis exhibetur, quales in ligno corrupto deprehendi, hic mutatur in aureliam, brevi tempore scarabæolus indè fuscus educitur, nigro capite ungviculisque nigris donatus.

IV. *Gramen miliaceum.*

HUjusmodi lucidè virescens eruca, qualis ad dextram in folio sursum erepit, hac super herbâ conspicitur, in anteriori utroque latere tribus ungviculis, in medio oetò & posterius adhuc duobus pediculis constat, in aureliolam viridem immutatur, ex quo flavescens papilio prodit elegans, fuscis nigrisque punctis, lineolisque adornatus duo gestat albicantia, nigrisque maculis aspersa cornula, viridibus formosus oculis, volatu celerrimus est. Ex alio latere curvè inflexa confidet eruca, hanc in betulâ inveni, texturam parabat albicantem, in aureliam è lucido flavam immutabatur, lucidisque & fuscis aspersa maculis phalænula inde prodiit, qualis suprâ erucam depingitur.

V. *La-*
