duobus adhuc pediculis constantem gressu celerrimam, in principio mensis Maii pelle exuebatur, in aureliam fuscam immutata, qualis infra conspicitur, immota jacebat, in principio Junii elegans in lucem indè papilio prodiit, cujus caput, alæ superiores, & ungviculi, atque cornula nigra erant, alis interim maculis flavescens conspersis, alæ inferiores duæ unà cum corpore minium referebant, volatu, præprimis tamen circa vesperam celerrimus erat.

Erucula hæc per dorsum viridis, & inferiùs alba pariter hac herbâ vescitur, Junio mense texturam conficit albam, ac in doliolum defiguratur, elapsis duodecim diebus, flava nigris lineis variegata musca in lucem prodit.

IX. *Nux juglans florens.*

Formosa viridis hæc eruca albis per universum corpus lineis, & albicantibus in quolibet membro punctis exornata reperitur in arbore nuciferâ, rarò tamen admodum, egò modò illam inveni, & in principium usquè Junii enutrivì, ubi foliis viridibus sese involvens telam albicantem tenuem parabat, ac in aureliam fuscam immutabatur, intrâ trium hebdomadarum spatium phalænula indè prodiit, cujus alæ superiores, ungviculi, & cornula fusca erant, inferiores alæ aureo colore rutilæ, vespere phalænarum omnium more volitabat.

X. *Viola matronalis purpurea.*

Hac super herbâ longiuscularum, ac gracilium erucularum genus ab antè sex ungviculis, & à retrò totidem pediculis constans invenitur, iter molientes partem corporis posteriorem priori jungunt, insignem gibbum hocce modo corpore formantes, hæc corporis proceritas curiosam inducit figuram, passus consequenter amplos promovent, Majo mense virides in aurelias immutantur, Junio elegantes indè producuntur papiliones capite, alisque superioribus flavo, fulcoque colore eleganter aspersis constantes, corpus unà cum alis inferioribus, ut & cornula cum ungviculis ex pallido flava, oculosque nigros gerentes, volatu, qualis ad dextram exhibitur, Ad celeres.
