Ad sinistram viridis, flavo capite eruca conspicitur, ab antè sex ungviculis, octo in medio, & à retrò duobus adhuc pediculis constans, in fine Aprilis flavam texturam parans in viridem punctis nigris variegatam aureliam immutatur, in medio mensis Maii candidus inde papiliunculus erumpit, tam in volando debilis ut ab arbore ad arborem vix aut ne vix quidem transire valeat.

XI. *Lychnis segetum, & filigo.*

Hocce super flore in filigine crescente, qualis culmum perreptat, erucam inveni, in principium usquè Junii per me enutriva deposuit exuvias, ac in aureliam fuscam immutabatur, in Decembrem usquè duriuscula & immota jacebat, ubi qualis suprâ florem repræsentatur, inde musca prodiit totaliter nigra, partis posticæ medietate exceptâ, quæ subflava perspicuis quatuor alis, translucidisque constabat.

Animalculum hoc infrâ spicæ culmum repens in medium usque Junium enutrivi, ubi inter filiginem in spicam irrepebat, & mutabatur in aureliam ex atro rubris punctis variegatam, medio Augusto, scarabæolus inde prodiit; vulgò (Lieven Heers Haantje) nostratibus audiens.

Interjacet autem acarus albus, cujus per dorsum subrubra linea decurrit, tales in mure mortuo circiter quinquaginta reperi, & servavi, paulò post in doliola defigurabantur, ex quolibet autem horum in lucem musca prodiit, qualis infrâ viridi folio insidens exhibetur, corpore cæruleo, lineis nigris virgato, oculis rubris, pedibus nigris, alisque duabus colorum varietate coruscantibus instructa.

XII. *Sambucus flore albo.*

Inferiùs ad sinistram è lucido flava viridi folio insidens eruca repræsentatur, per cujus corpus duæ lineæ transversæ nigrae, à retrò autem tres aliæ nigrae per corpus rectâ feruntur, dentes habet nigros, ab antè sex ungviculis, in medio octo pedibus constat; fronde viridi hujus arboris vescitur, perfectam consecuta magnitudinem texturam albam conficit, ac
