cujus cornula plumas referunt , uti superiùs est videre..

XX. *Plantago minor florens.*

Longæ è lucido viridis crucæ pabulum est hæc herba, albis per corpus virgata lineis, ac quâlibet in incisione lineâ albicante condecorata est, sub finem Junii fuscæ in aureliam immutatur, in Augusti principio phalænula, cujus alæ superiores albæ lineis nigricantibus exornatæ, alæ verò inferiores cinereo, oculi cornulaque nigro colore tincta sunt, vespere volitans indè producit. Hujusmodi longos vermes in terra reperi, acaros colore referentes capite constabant nigricante, eos in finem usque Junii conservavi, ubi fulvas in aurelias immutabantur, in medio Julii qualibet ex aureliâ fusca, translucidis alulis, quatuor ad currendum pediculis, & à retro duobus adhuc rectâ extensis instructa musca producta fuit.

XXI. *Lilium aureum.*

Hujus generis crucas in hoc flore reperi, superiùs fuscas, nubilis virgatas lineis inferiùs flavas, ungviculis, & pediculis similibus instructas, in finem usque Junii eas enutrivimus, ubi hepatici coloris aurelias immutabantur, in Augusti medio è lucido, & obscuro fusca prodiit indè phalænula, vespere volitabat.

Inferiùs rotunda quatuor minii rubro colore tincta animalcula folio superjacent, qualia super hisce liliis inveni, foliis viridibus insident invicem sibi juncta, & ex iis succum viridem fæculentum extrahunt, in hocce recondita jacent, ne conspiciantur, in aurelias rubras ea mutari, quales paulò superiùs folium aliquod exhibet, animadverti, unde rubicundi producuntur scarabæoli, proximè appicti, manu clausâ auribus admoti curiosè pipiunt, ova pariter rubra, ac ordine quidem lineatimque pariunt, uti paulò superiùs in folio videre est, ex quibus tandem iteratò talia, qualia priùs fuerunt, animalcula prodeunt.
