tingvuntur ; ex aureliis ex obscuro viridibus animalcula nigra volantia, vespamarum similia, ungviculis flavis, alisque pellucidis instructa excludebantur , & ex aureliis nigris ex obscuro cinereæ, nigris & argenti more splendentibus lineis punctisque adornatæ, duobus nigris cornulis oblongis duobusque brevibus, ungviculis quatuor cinerei coloris constantes, quales supra sunt depictæ, phalænulae prodierunt.

Aliam à sinistrâ folio insidentem eruculam in pruno reperi, ejusdemque foliis enutrivi, quamdiu mihi folia dabantur, post tenui telæ sibi paratæ, sine pabulo viva tamen immorabatur in sequentis anni mensis usque martium, ubi in aureliam è lucido flavam immutabatur , unde lineis maculisque nigris & albis variegata phalænula in Martii medio prodibat , cornulis duobus cinereis, quatuorque ungviculis instructa qualem figura exhibet.

### XXXIII. *Echium vulgare cœruleum.*

**P**Ufilla quidem, at nitida, hac herbâ, pascitur erucula nigricans, sparsis per dorsum crucibus, lineisque transversis albis signata, in gradiendo celerrima, in medium usque Septembrem per me enutrita telam confecit albam, cui in sequentis anni mensis Aprilem usque immorabatur , ubi supra depictæ parvæ nigricantes muscæ productæ fuerunt.

Aciculis affixâ ligneis in scatulis, pro consuetudine meâ, phalænarum papilionumque copiâ, ut quorundam annorum decursu exsiccata licet, exsangvia animalcula ad vivum, quantum fieri posset, amatoribus repræsentarem, ex his exsiccatis viventes novos vermiculos fulcos lineolis albicantibus transversis superiùs signatos prodissimè animadverti, quibus materia, ex quâ producti fuerant, esca fuit, usquedum in aurelias è lucido fuscas immutarentur, è quibus post breve temporis spatium scarabæoli nigri prodierunt, per quorum dorsum linea fusca transversa decurrit, quæ transfiguratio propè caulem exhibitur.

Ad sinistram quoque, quales in caseo reperiuntur, vermis in folio repræsentatur, hunc in dolio fuscum immutari deprehendi, unde spatio quatuordecim dierum muscæ exiles fuscae producuntur..
