

## Werk

**Titel:** Erucarum ortus, alimentum et paradoxa metamorphosis

**Autor:** Merian, Maria Sibylla

**Verlag:** Oosterwyk

**Ort:** Amstelædami

**Jahr:** 1717

**Kollektion:** Zoologica

**Digitalisiert:** Niedersächsische Staats- und Universitätsbibliothek Göttingen

**Werk Id:** PPN476830389

**PURL:** <http://resolver.sub.uni-goettingen.de/purl?PPN476830389>

**OPAC:** <http://opac.sub.uni-goettingen.de/DB=1/PPN?PPN=476830389>

**LOG Id:** LOG\_0096

**LOG Titel:** XXXIX. Brassica viridis

**LOG Typ:** chapter

XXXVIII. *Eryngium Campestre.*

**S**imile nigricantium erucarum genus, quarum una inferiori folio insidet, in urticis invenitur; cum in primâ parte jam delineaverim urticam, eringium hoc campestre pulchritudinis suæ causâ hic appingere volui.

Sub finem Junii metamorphosin subeunt hæ erucæ, à retro fixæ deorsum propendent, evadentes fuscæ velut auro coruscantes aureliæ, spatio quatuordecim dierum elapso formosi papilionones inde prodierunt, quorum alæ inferiores ferruginei, superiores autem paulò lucidioris erant coloris, maculis albicantibus aspersæ, corpore nigro, cornulis ex albo aculeatis, ungviculis cinerei coloris constabant, in volando celeres.

Sedet & infrâ viridis erucula capite flavo, hæc in urticis etiam invenitur, quarum folia convolvit, & in ea se recipit, in eisdem mutatur in aureliam fuscam, elapso quatuordecim dierum spatio exilis è lucido fusca lineis nigris virgata phalænula producitur; harum erucarum aliquæ prostratæ emoriuntur, è quibus parvuli quàm plurimi prodeunt Acari, brevi temporis spatio mutantur in doliola, unde post decem aut duodecim dies parvulæ muscæ nigricantes exeunt.

XXXIX. *Brassica viridis.*

**P**lantam hanc recentem adhuc, herbea eruca gulosè depascitur, quæ flavâ per dorsum lineâ, & in utroque membri cujuslibet latere punctulis nigris signata est, perfectam nacta magnitudinem pelle suâ sese exuit, alibi suspenditur, ac in fuscâ punctis nigris notatam aureliam immutatur, elapso quatuordecim dierum spatio papilionum priùs demonstratis minorum genus indè educitur.

Augusto mense eruculas in brassica quoque deprehendi, virgata per dorsum lineâ signatas, quolibet in membro duobus pediculis instructas, hæ in aurelias erucæ parùm absimiles immutabantur, elapsis decem diebus muscæ, corpore nigris albisque maculis asperso, rubris oculis, ungviculisque sex flavis constantes in volandæ tardæ indè prodierunt.
