XL. *Acetosa pratensis florens.*

Super hac herbâ nigricans rubris albisque maculis asperfa lanuginosa deprehenditur eruca, cujus pili cum capite, sex anticis ungviculis, & octo pediculis è lucido fusci sunt, perfectam consecuta magnitudinem aliò cum flexurâ sese collocat, lucescit, & in aureliam è lucido fuscam immutatur, aliquæ tales trium mensium spatio, aliæ in subsequenti anni mensem Aprilem usque permanebant; ubi tandem exilis inde phalænula prodiit, cujus corpus alulæque inferiores flavæ, caput cum alulis superioribus, cornulis, ungviculisque fuscum aculeis nigris instructum erat, vespere volitat.

XLI. *Urticæ urentis folia.*

Tres hic erucæ generis quidem ejusdem, diversi tamen coloris exhibentur, superior viridi folio infidens in totum nigricans punctulis albis fulgentibus supra pilorum radicem, ac inferiùs ab utroque latere linea flavâ est exornata, in medium usque Septembrem per me enutrita fursùm deorsum propendens fuscam in aureliam immutabatur, elapso quatuordecim dierum spatio formâ alios atque specie, longo post se intervallo relinquens indè papilio prodiit, constans corpore, capite, cornulis, ungviculisque ferruginei coloris, latâ minii rubedinem referente lineâ, cæruleis albisque maculis signatus, alulæ inferiores haud vulgari pulchritudine sunt donatæ, diversis è variorum colorum invicem mixtorum genere ornamentulis illustratæ.

Sub hac ad dextram collocata eruca corpore è lucido flavo, capite fusco, ungviculis pediculisque roseo colore tinëtis constat, simili metamorphosè fuscam in aureliam immutabatur, unde pariter elapso quatuordecim dierum curriculo superiùs allegato similis papilio productus fuit.

Tertia in rotundum flexa eruca priùs nigra colorem immutavit, fusca facta, & humi sternebatur in rotundum flexa, ex quâ brevi temporis spatio quamplurimi exiles acari prorepebant, qui in unum sese contextentes in doliola tandem immutabantur,

duodecim diebus elapsis, qualis hic unâ exhibetur nigra quolibet è doliolo musca prodiit.

Infimo folio fusca pilosaque erucula insidet, cujus cum ventre dorsum rubescebat, tacta convolvebatur instar globuli, sub finem Maii humi flexa sternitur, ac in medium usque junium immota jacet, ubi tandem musca prodit, cujus caput, corpus & cornula nigro, quatuor alulæ pellucido, ungviculi-que flavo colore tincti erant, in postica parte maculâ nigrâ conspersa fuit.

XLII. *Linum florens.*

Hicce flos erucæ subviridi flavæ cedit in pabulum hæc inferiùs è lucido viridi colore tincta ab utroque latere albicante lineâ signata est, ab ante sex ungviculis, in medio octo, & à retrò duobus adhuc pediculis constat, in Augusti principio depositis exuviis coruscantem in aureliam immutabatur, ultimâ subsequenti anni mensis Maii die cinerea prodiit indè phalæna, cujus alæ nigro colore erant exornatæ, nigris constabat oculis, sub vesperam volitabat.

XLIII. *Centummodia, sive polygonum florens.*

AD sinistram fusca collocatur eruca, inferiùs cinerea, ab antè sex ungviculis, in medio octo, & à retrò duobus adhuc pediculis constabat, sub finem Julii in aureliam è lucido fuscam immutabatur, in medio Augusti cinerea lineis nigris virgata indè prodiit phalænula vespere volitans. Inferiùs adhuc ad dextram eruca viridis exhibetur, tribus flavis per corpus lineis, pluribusque maculis nigricantibus exornata, hac herbâ in finem usque Julii ipsam enutrivit, ubi jacebat immota, elapso quatuordecim dierum spatio parvi triginta quatuor albicantes acari exindè prorepebant, exiguo temporis spatio in doliola mutati, ex quibus sub finem Julii parvæ totidem muscæ nigræ proruperunt.

Alia pari modo hujus generis eruca humi silentiosè sternebatur, unde magnus albicans vermis prorepsit, hic in doliolum fuscum immutatus in ingentem fuscam lineis nigris variegatam mus-
