L. Carduus vulgaris.

Superiùs floris hujus cauli brevis crassus vermis, auteruca infidet, hæc herba quidem non est hujus erucæ pabulum, sed exilibus in hac herbâ commorantibus animalculis vescitur; eam mense Julio fuscum in doliolum immutari animadversum habui, cujusmodi unum apertum in folio viridi remonstratur, elapso decem dierum spatio flava indè musca producta fuit, rubris constans oculis, viridem retrò caput maculam ostentans, corpus lineis nigris adornatum habens, alæ erant pellucidæ, ambæ nigricante rotundâ maculâ signatæ. Infrâ ad dextram vermis jacet, corpore vermis è casto producti colorem referente, oculis membroque postremo fusco colore tinctis constans, hunc cum doliolis hisce fuscis in frustro corrupti ligni betulæ mense februario reperi, ex hisce doliolis nigrarum flavis lineis virgatarum vesparum genus in lucem mense Majo prodiit, alæ harum utriusque quatuor pellucidæ, cornula nigra, unguiculi que flavi erant.

Inferiùs adhuc ad sinistram vermiculus humi jacet, acarum colore referens, quem pariter in ligno corrupto reperi, in doliolum fuscum immutabatur, unde mense Majo fuscus è regione vermis exhibitus scarabæolus producebatur.

Finis Secundæ partis.
