TItulare partis hujus tertiæ folium ovo oblongè rotundo ſeſe intexentium formicarum metamorphoſin exhibet; quarum ova canariæ avibus edenda traduntur. Ex ovis, ad maturitatem ubi pervenerunt, exiles, majoresque muſcæ prodeunt, quas (ut in titulari folio videre eſt) educi copioſiſſimè, animadverti. Vigeſimâ quinta Julii anni 1694. integrum, horum animalculorum omnis generis, minutorum æquè ac grandiorum, tam alatorum, quàm alis carentium millia, nonnulla quoque ſuis ex ovis, perceptâ volandi facultate, prorepentia comprehendentem nidum acquiſivi, unde ea ſimili cum erucis metamorphoſe mutari, colligere facili negotio potui. Hic inferiùs ea collocavi, ut unà cum Salomone virtutes eorum indagarem. Porro formicarum, in indiâ orientali, ità dictum, Regem in viridi malvæ foliolo collocavi, cujus poſterior pars corporis majorem molliuſculum ſubalbum vermem repræſentat.

I. *Flos Hyeroſolomitanus.*

HIc ergo cæterarum erucarum, reliquorumque vermium mutationes exhibentur.

Erucarum ſuper hocce flore ſedentium quindecim eodem flore enutrivi, verùm aliquando neglectâ per oblivionem pabuli exhibitione ſemetipſas edendo conſumpſerant tribus exceptis, quæ ſuperſtites remanſerant, hæ Septembris octavâ die degenerabant in aurelias, ſubſequentis anni menſe Majo, qualis hic appingitur, indè phalænulæ cinereæ prodierunt.

II. *Solanum vel ſolatrum.*

HÆc herba viridis, fructui vicinæ, erucæ pabulum eſt, decimâ die Junii mutatur in aureliolam, ac vigeſimâ quintâ Junii lignei coloris papiliunculis inde prodiit, in volando celerrimus. Hic è regione nigra petiolum perreptans erucula conſpicitur; depoſitis exuviis vireſcebat; ſambuco prius albicante eam enutrivi, aſt exinde nullatenùs immutabatur, hanc ergo herbam ei porrexi in eſcam, confectâ tandem albâ
