texturâ, flavo, qualis hic unâ exhibetur, inde musca produc-
ta fuit.

III. *Alcea.*

HÆc herba proprium viridis hujus erucæ pabulum est, hac illam servavi vivam in augustum usque, ubi fuscam in aureliam immutabatur, & vigesimâ primâ subsequentis anni die Maii priùs inde phalænula prodiit.

IV. *Flos cardinalis.*

Fuscas hujusmodi erucas his in floribus amstelodami reperi, quibus eas etiam enutrivi in octavum usque diem Septembris anni 1695. ubi mutabantur in aurelias, vigesimâ quintâ Junii subsequentis anni, qualis in hac figurâ demonstratur, papiliones inde producebantur.

V. *Labrasca.*

PArvulum baccis rubentibus infidens animalculum solummodo foliorum horum succo fruitur; nonâ die Junii colorem suum planè omninoque commutavit, quemadmodum in caule cernitur; decimâ septimâ die dicti mensis in aureliam conversa fuit; vigesimâ nonâ ejusdem lucidiore colore tinctum, aliam pariter formam induit, septimâ tandem Julii die, qualis infra cernitur, scarabæolus auriaci coloris inde prodiit.

VI. *Spinus vel prunus sylvestris.*

MAgnum harum erucarum unâ congregatarum, admodum exilium numerum in pruni sylvestris dumo repere, circâ quem texturam amplam confecerant. Septimâ horâ vespertinâ in unam collectæ tam arcte conjungebantur invicem, ut rotunda nigricantis holoserici particula esse crederentur; integrum cum foliis omnibus ramum unâ cum texturâ rescidi, ac ejusmodi virides ramulos adferri quotidiè, curavi, quos aquæ recenti pro escâ quotidiana immergebam; horâ nonâ matutinâ om-

omnes & singulæ ad pabulum confluxerè, deinde vero ad laborem, in eo consistentem, ut sibi domum exstruerent, accurrerunt. Cameras ergo alias suprà alias sibi texentes, lati semper digiti spatiū interponebant, constructo pariter tantæ capacitatis ostio, ut perfectam noctæ magnitudinem eidem inhabitare valeant. Suis ergo cameris, sole suos diffundente radios, omnes & singulæ recipiebantur, eisdem ad deliquium usque solis immorantes; quotidianam hæc actio in consuetudinem abierat in vigesimum quartum usque Junii diem, ubi ovis oblongè rotundis sese intexere incipiebant, in quibus in subsequentis anni mensem Martium usque latuerunt, extunc autem phalænulæ prodierunt.

VII. *Malva.*

VIridis & lineis albicantibus exornata eracula hoc flore tanquam pabulo in primam usque Junii diem vescitur, ubi mutatur in aureoliā; gressus erat celerrimi, vigesimâ primâ dicti mēnsis hujusmodi papilioñ flavi prodierunt; major eruca pariter hocce flore pascitur, immota plerumque jacebat, at à minutissimo etiam animalculo contrectata, bile veluti mota, huc illuc feriebat. Tertiâ die Junii in collectis foliis quieti se dedit, decimâ octavâ Junii in aureliam immutabatur, decimâ verò sextâ albicans hujusmodi inquieta phalæna producta fuit.

VIII. *Aquilegia vel Aquilina.*

VIridis hæc eruca hocce flore tanquam pabulo vescebatur, primâ Augusti harum aliquæ flavis ovis sese intexuerunt, decimâ octavâ nigræ hujusmodi muscæ indè prodierunt, ut latus habet.

Fuscum ac albicans animalculum sex unguiculis instructum pediculis tanquam pabulo vescebatur; secundâ die Junii rotundo albicanti ovo se intexuit, vigesimâ secundâ ejusdem mēnsis è lucido virentia proruperunt animalcula volantia, quorum unum superiùs semini insidens conspicitur.
