IX. *Lanium vel galeopsis florens.*

Hujusmodi virescentes eruculae, quarum una viridi folio infidet, hac herbâ tanquam pabulo fruitae sunt in mensem usque Augustum, ubi albis, quorum unum caulis inferius exhibet, ovis sese intexuerunt; subsequens anni mense Majo supra erucam exhibitae similes muscae prodierunt.

Minima erucula flavo colore tincta, lineolisque rubris adornata eadem herbâ suo tanquam pabulo vescitur; in Julii principio albicanti ovo sese intexit, & ultimâ die dicti mensis papiliunculus hincce prodiit, qui in summitate floris exhibetur.

X. *Ficus.*

Fuscas has erucas fici foliis enutriti in mensem usque Augustum, ubi mutabantur in aurelias, mense vero Septembris fuscæ hujusmodi phalænæ proruperunt.

XI. *Consolida Regalis.*

Hi flores huic viridi albæque erucæ cedunt in escam, quæ vigesimâ nonâ Junii in aureliolam immutabatur, decimâ quintâ Julii ex hac, in aureliolâ in ovum fuscum conversâ, hujusmodi musca magna, & ex aliâ simili vigesimâ die dicti mensis fusca talis phalænula prodiit. Variæ quæstiones antehac istius mutationis tam diversæ à variis institutæ fuerunt, quænam tantæ muscam inter & phalænulam differentiae vera ratio statuenda esset, nec admitti facile posse, quod una foeminei, masculi verò sexûs altera sit; sed effluxis aliquot annis ego, muscas his erucis infedisse, moramque trahentes intra erucæ membra semen effudisse deprehendi; cumque erucæ substantiâ tanquam pabulo vescerentur, fuscum in ovum immutatæ tandem similes in muscas transfiguratae fuerunt.

XII.
