IX. *Lamium vel galeopis florens.*

**H**Ujsmodi virescentes eruculæ, quarum una viridi folio insidet, hac herbâ tanquam pabulo fruitæ sunt in mensem usque Augustum, ubi albis, quorum unum caulis inferius exhibet, ovis sese intexuerunt; subsequentis anni mense Mayo suprà erucam exhibitæ similes muscæ prodierunt.

Minima erucula flavo colore tincta, lineolisque rubris adornata cùdem herbâ suo tanquam pabulo vescebat, in Julii principio albicanti ovo sese intexuit, & ultimâ die dicti mensis papiliunculus hicce prodiit, qui in summitate floris exhibetur.

X. *Ficus.*

**F**uscas has erucas fici foliis enutrivi in mensem usque Augustum, ubi mutabantur in aurelias, mense verò Septembre fuscae hujusmodi phalænæ proruperunt.

XI. *Consolida Regalis.*

**H**I flores huic viridi albæque erucæ cedunt in escam, quæ vigesimâ nonâ Junii in aureliolam immutabatur, decimâ quintâ Julii ex hac, in aureliolâ in ovum fuscum conversâ, hujusmodi musca magna, & ex aliâ simili vigesimâ die dicti mensis fusca talis phalænula prodiit. Variæ questiones antehac istius mutationis tam diversæ à variis institutæ fuerunt, quænam tantæ muscam inter & phalænulam differentiæ vera ratio statuenda esset, nec admitti facile posse, quod una fœminei, masculi verò sexûs altera sit; sed effluxis aliquot annis ego, muscas his erucis insedisse, moramque trahentes intra erucæ membra semen effudisse deprehendi; cumque erucæ substantiâ tanquam pabulo vescerentur, fuscum in ovum immutatae tandem similes in muscas transfiguratae fuerunt.

## XII.
