captura cibum, exiens; ultimatìm fuſca fiebat; vigeſimâ primâ Maii inter hæcce folia ſeſe intexens ibidem in aureliam immutabatur, unde tandem lignei coloris papiliunculus exiit.

Infimam ſubviridem fuſcam erucam hiſce foliis pariter enutrivi ſvalbaci in menſem uſque Junium anni 1683; tacta viridem quendam liquorem excernebat, in rotundum convoluta diu ità jacebat; naturæ fuit admodum ſilentioſæ, ita ut horis integris jacuerit immota; decimâ quarta commutabatur in aureliam, ſecundâque Julii formoſa ſimili ferè cum erucâ floribus inſidente, colore tincta phalænula prodiit.

XXII. *Tithymalus.*

HUjuſmodi erucæ adhuc parvæ, flavæ ſunt atque nigræ, majores autem factæ rubeſcunt; tactæ capite, haud ſecùs ac irritatæ, hùc illùc feriunt; hujus generis quàmplurimas habui Francofurti, ſed omni tempore mihi deſtruebantur, ac inde non niſi muſcæ prodierunt; hanc herbam avidè depaſcebantur. Anno 1684. decimâ octavâ die Junii duæ rurſus in aurelias immutabantur, ac tandem die nonâ Julii formoſam hanc phalænulam inde retuli, alterâ eâdem adhuc die ovum viride pariente.

XXIII. *Periclymenus.*

ELegantium harum viridium erucarum Francofurti quàmplurimas in periclymeno, quo enutriebantur, inveni; decimâ tertiâ earum una mutabatur in aureliam, quintâque Junii ſubſequentis anni elegans hujuſmodi phalæna indè producta fuit. Cæteræ, quas habueram, deponentes exuvias propemodùm omnes emoriebantur, aut hujuſmodi muſcæ tandem educebantur; Amſtelodami periclymeno illas enutrivi.

XXIV. *Cotoneæ flos.*

ANno 1683; primâ die Maii Francofurti ad mœnum ſuprà mala cydonia hanc erucam inveni, quorum foliis etiam eam enutrivi, inquieta erat admodùm, hùc illùc continuò
