captura cibum, exiens; ultimatim fusca fiebat; vigesimâ primâ Maii inter hæcce folia sese intexens ibidem in aureliam immutabatur, unde tandem lignei coloris papiliunculus exiit.

Infimam subviridem fuscâ erucam hisce foliis pariter enutrivit svalbaci in mensem usque Junium anni 1683; tacta viridem quendam liquorem excernebat, in rotundum convoluta diu ita jacebat; naturæ fuit admodum silentiosæ, ita ut horis integris jacuerit immota; decimâ quarta commutabatur in aureliam, secundâque Julii formosa simili ferè cum erucâ floribus insidente, colore tincta phalænula prodiit.

#### XXII. *Tithymalus.*

**H**ujusmodi erucæ adhuc parvæ, flavæ sunt atque nigræ, majores autem factæ rubescunt; tactæ capite, haud secus ac irritatæ, huc illuc feriunt; hujus generis quàm plurimas habui Francofurti, sed omni tempore mihi destruebantur, ac inde non nisi muscæ prodierunt; hanc herbam avidè depascebantur. Anno 1684. decimâ octavâ die Junii duæ rursus in aurelias immutabantur, ac tandem die nonâ Julii formosam hanc phalænulam inde retuli, alterâ eâdem adhuc die ovum viride pariente.

#### XXIII. *Periclymenas.*

**E**legantium harum viridum erucarum Francofurti quàm plurimas in periclymeno, quo enutriebantur, inveni; decimâ tertiâ earum una mutabatur in aureliam, quintâque Junii subsequenti anni elegans hujusmodi phalæna inde producta fuit. Cæteræ, quas habueram, deponentes exuvias propemodum omnes emoriebantur, aut hujusmodi muscæ tandem educebantur; Amstelodami periclymeno illas enutrivit.

#### XXIV. *Cotonæ flos.*

**A**nno 1683; primâ die Maii Francofurti ad moenum supra mala cydonia hanc erucam inveni, quorum foliis etiam eam enutrivit, inquieta erat admodum, huc illuc continuo cur-
