XL. *Salicis folium.*

**S**uperior eruca viridis salicis folio nutriebatur, tacta subito convolvebatur, & è quolibet membro per modum siphonis quid limpidi liquoris excernebat, quotiescumque contractata fuerat vigesimâ Augusti texturam amplam paraverat, unde subsequenter anni vigesimâ quintâ Junii quale è regione erucæ cernitur, flavum nigrumque animal eductum fuit;

Secunda semiflava, semique viridis eruca pari pabulo vesciebatur, eodemque in frisâ eam enutrivit; anno 1690. decimâ die Julii hæc ipsiusque generis erucæ cinereis ovis alternatim sese intexuerunt, unde similes, quarum una in medio cernitur, flavæ muscæ primâ Augusti productæ fuerunt.

Infima hæc nigricantia, punctis nigris notata, cadentia animalcula, supina præprimis haud facili negotio eriguntur. Salice aquoso vescuntur, vigesimâ quintâ Julii 1689. flavis ovis sese intexuerunt, decimâ quintâ Julii scarabæoli similes inde prodierunt.

XLI. *Folium salicis.*

**F**lavescentes hæc, maculisque nigris aspersæ erucæ foliis salicis pascuntur; vigesimâ septimâ Augusti 1689. duodecim dierum spatio jacebant immobiles, usquedum pelle sua exuerentur, eleganterque virides in aurelias intrâ quatuor horarum spatium fusco colore tinctas immutarentur; & vigesimâ primâ Maii in mensem usque Junium elegantes hæc phalænæ ova viridia parientes inde prodierunt. Hujusmodi ex obscuro cinerea. quorum unum hic inferius unâ cum transformatione suâ repræsentatur, animalcula quartâ die Junii in salicibus inveni, quorum foliis vesciebantur; summitatum tamen solummodò succum depascentia foliis alioquin integris relictis. Duodecimâ Junii folio aut stipiti cuidam affixa metamorphosin subierunt, usquedum vigesimâ quartâ Junii ex obscuro virides hujusmodi scarabæoli inde prodierint.
