XLII. *Rosa.*

Hujusmodi erucæ rosarum foliis tanquam pabulo vescuntur, ex confectâ Julio mense texturâ prodeunt adhuc phalænulæ Augusto mense; sed Augusto sese intextentes immotæ jacent in subsequenti anni mensem usque Julium, ubi prius ex inde phalænulæ educuntur, è quibusdam etiam aureliis vermes excreverunt, in ova fusca ex tempore commutati; quatuordecim diebus elapsis hujusmodi muscæ proruperunt.

XLIII. *Rosa.*

Suprema flavescens erucula rosis in decimam usque quartam Julii pascebatur, ubi cum reliquis, ovis albicantibus intexta quartâ Augusti in hujusmodi muscam transformata fuit. Inferior eruca viridis rosis quoque vescebatur tanquam pabulo suo; vigesimâ primâ Maii nonnullæ hujus generis intextæ foliis in aurelias immutabantur, unde decimâ quartâ Junii lucidi ochræ colore tincti papiliunculi fimiles educebantur.

Harum semiviridium, & semiroseæ coloris erucarum calycibus irrepentium super rosis, quàm plurimas inveni, quarum folia depascebantur; quintâ Maii suum cum viridi colorem immutantes in aurelias inversæ fuerunt, unde vigesimâ secunda dicti mensis fusci tales papiliunculi prodierunt.

XLIV. *Rosa.*

Minimarum viridium erucarum quàm plurimas super rosis inveni, quibus etiam eas enutrivimus; vigesimâ primâ Maii mutabantur in aurelias fuscas, & sextâ Aprilis subsequenti anni, quales suprâ eruculam cernuntur, papiliunculi inde prodierunt. Superiorem fuscam erucam rosarum quoque foliis enutrivimus; anno 1684. à vigesimâ Maii in sextam usque Junii ferrugineo colore tingebatur, nonâ Junii in paratâ sibi telâ mutabatur in aureliam, unde vigesimâ nonâ dicti mensis, qualis suprâ eruculam cernitur, papiliunculus prodit.
