XLII. *Roſa.*

HUjuſmodi erucæ roſarum foliis tanquam pabulo veſcuntur, ex confectâ Julio menſe texturâ prodeunt adhuc phalænulæ Aaguſto menſe; ſed Auguſto ſeſe intexentes immotæ jacent in ſubſequentis anni menſem uſque Julium, ubi prius ex inde phalænulæ educuntur, è quibuſdam etiam aureliis vermes excreverunt, in ova fuſca ex tempore commutati; quatuordecim diebus elapſis hujuſmodi muſcæ proruperunt.

XLIII. *Roſa.*

SUprema flaveſcens erucula roſis in decimam uſque quartam Julii paſcebatur, ubi cum reliquis, ovis albicantibus intexta quartâ Auguſti in hujuſmodi muſcam transformata fuit. Inferior eruca viridis roſis quoque veſcebatur tanquam pabulo ſuo; vigeſimâ primâ Maii nonnullæ hujus generis intextæ foliis in aurelias immutabantur, unde decimâ quartâ Junii lucidi ochræ colore tincti papiliunculi ſimiles educebantur.

Harum ſemiviridium, & ſemiroſei coloris erucularum calycibus irrepentium ſuper roſis, quàmplurimas inveni, quarum folia depaſcebantur; quintâ Maii ſuum cum viridi colorem immutantes in aurelias inverſæ fuerunt, unde vigeſimâ ſecunda dicti menſis fuſci tales papiliunculi prodierunt.

XLIV. *Roſa.*

MInimarum viridium erucularum quàmplurimas ſuper roſis inveni, quibus etiam eas enutrivi; vigeſimâ primâ Maii mutabantur in aurelias fuſcas, & ſextâ Aprilis ſubſequentis anni, quales ſuprà eruculam cernuntur, papiliunculi inde prodierunt. Superiorem fuſcam erucam roſarum quoque foliis enutrivi; anno 1684. à vigeſimâ Maii in ſextam uſque Junii ferrugineo colore tingebatur, nonâ Junii in paratâ ſibi telâ mutabatur in aureliam, unde vigeſimâ nonâ dicti menſis, qualis ſuprà eruculam cernitur, papiliunculus prodiit.
