XLV. *Roſa.*

PEndula viridis erucula his quoque roſis paſcitur; hocce genus erucularum à dorſo ſæpe ſæpius obrepit, filoque ex ore prodeunte deſcendit ac aſcendit. Decimâ Maii mutatur in aureliam, decimâ tandem octavâ in muſcam nigram transformatur.

Major eruca viridis roſis pariter fruitur; vigeſimâ ſecundâ Maii depoſitis exuviis mutabatur in aureliam, unde poſt dies quatuordecim ochræ colore tincta phalæna prodiit.

XLVI. *Abiegna folia.*

CInereas has erucas ſilentioſas admodùm, prorſus immotas, in unum convolutas foliis ſubjacentes, & non niſi avium excrementa repræſentantes, priùs erucas eſſe dubitavi; malorum foliis eas in Friſiâ enutrivi; vigeſimâ tertiâ harum una folium ità firmiter contexuit, haud ſecus ac ſi glutine compactum eſſet, in quo mutabatur in aureliam; cæteræ paratis ſibi texturis ordinariis, mutabantur in eiſdem in aurelias, decimâ quartâ Aprilis ſubſequentis anni primus papilio prodiit, quem alii menſe Maii ſequebantur, è lucido viridia ova parientes, papiliunculus infrà erucam cernitur.

Erucam viridem unà cum ſuperiùs allegatâ envinereâ, eâdem ſuper arbore reperi; decimâ octavâ Auguſti ſilentioſè proſtrata deponebat exuvias, ac abſque texturâ mutabatur in aureliam; ſubſequentis anni decimâ quartâ Aprilis prima phalæna prodiit, qualis in ſupremo viridi folio cernitur, cæteræ verò ſubſequente menſe Majo producebantur.

XLVII. *Convolvulus.*

REmonſtrato licet in præcedente folio ultimarum harum erucarum pabulo, & hæc arbor etiamſi ſylveſtris ſit, extrema tamen hæcce folia floribus exornare volui, nullatenùs dubitans, quin rem amatoribus pergratam facerem. Fuſca hæc eruca vigeſimâ die Junii texturam paraverat flavam, ac in eâ flavam in aureliam quoque fuit immutata, unde decimâ quartâ Julii hæc auriaci coloris phalæna prodiit.

XLVIII.
